**Get the latest, most up-to-date specification data
on products listed in this catalog by calling
Bussmann Information Fax.**

BIF is a simple to use automated fax response system. No need to wait for normal business hours; **BIF** is available around the clock for your convenience. All you need is a touch-tone telephone and a fax machine to get specification data when you want it.

A **BIF** document number is indicated with each product in this catalog. To get a detailed specification sheet simply call **636-527-1450** and follow the prompts. In a matter of minutes, a data sheet will be faxed to you. It's that simple!

Bussmann Worldwide Web ~ <http://www.bussmann.com>

Bussmann®

Worldwide Circuit Protection Solutions

North America's leading supplier of fuses and fusible protection systems,

Bussmann® continues its 88-year history of blazing new trails of innovative technologies.

Maker of the industry's first truly global product line, each item is backed by an efficient worldwide network of distribution, customer service and technical support. Bussmann® products include the most extensive circuit protection solutions that are built and tested to a variety of major standards and agency requirements such as: U.L., CSA, IEC, ISO... Additionally, both European (DIN, British Standard) and North American styled fuses are used for a wide range of applications: industrial motor protection, power conversion, medium voltage power distribution, telecommunications

network equipment, electronics, and automotive. Manufacturing operations in the U.S., Denmark, and the United Kingdom have earned ISO 9000 certification, assuring Bussmann customers only the utmost quality across every product line. Knowledgeable. Responsive. Customer focused. Bussmann® continues to set the standard for circuit

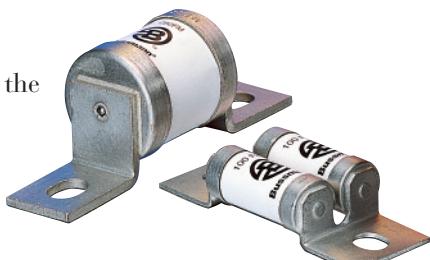

protection solutions in the global marketplace.

Bussmann—The Source For Global Solutions In Semiconductor Protection

Today's power electronics market knows no international boundaries – so neither should the high speed fuses that are used to protect semiconductor devices.

Only one fuse maker – Bussmann® – has the resources required to meet all of the power conversion industry's principle needs:

- Knowledgeable technical support
- Cutting-edge application design
- Global sourcing & manufacturing
(certified to ISO 9000 standards)

Bussmann® offers a comprehensive range of high speed fuselinks, specifically designed for semiconductor device protection. These products use advanced materials and technology to deliver unsurpassed performance.

All high speed fuses carry the quality assurance of the Bussmann® name – the recognized world leader in circuit protection.

This brochure summarizes the features and benefits of the following high speed fuses that Bussmann® manufactures for the power electronics market:

- North American
- British
- European (DIN)
- Ferrule

This catalog is intended to present product data and provide technical information that will help the end user with design application. Bussmann® reserves the right, without notice, to change design or construction of any products and to discontinue or limit distribution of any products. Bussmann® also reserves the right to change or update, without notice, any technical information contained in this catalog. Once a product has been selected, it should be tested by the user in all possible applications.

General Applications

Rated Voltage

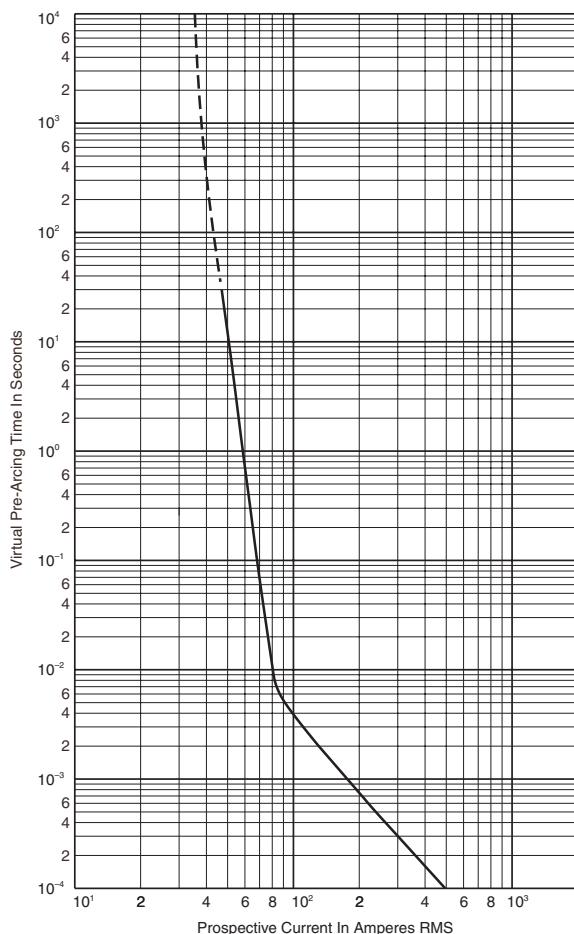

The ac voltage rating of Bussmann fuses is given in volts RMS. Fuses tested to IEC are tested at 10% above their rated voltage. British Style BS 88 fuses are tested at 5% above its rated voltage. U.L. recognition tests are performed at the rated voltage.

Rated Current

Rated current is given in amperes RMS. Bussmann fuses can continuously carry the rated current.

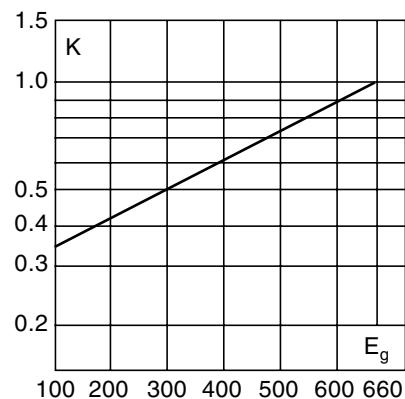

Melting Characteristic

The melting characteristic shows the virtual melting time in seconds as a function of the prospective current in amperes RMS. The fuses are specially constructed for short-circuit protection against high level fault currents. Loading and operation of the fuse in the non-continuous/dashed section of the melt curve must be avoided. The curve can also be read as the real melting time as a function of the RMS value of the pre-arc current.

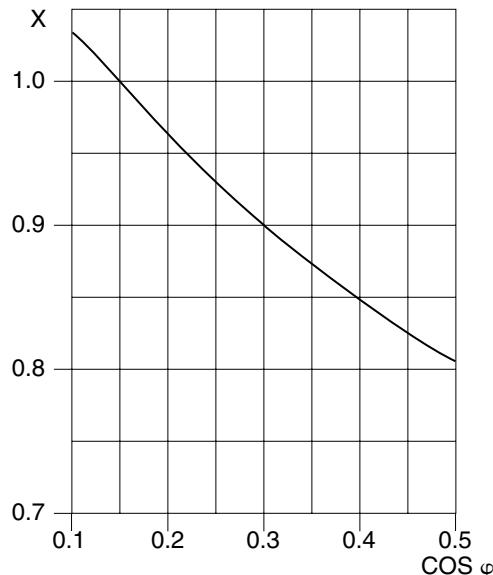

Clearing Integrals

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g , (RMS).

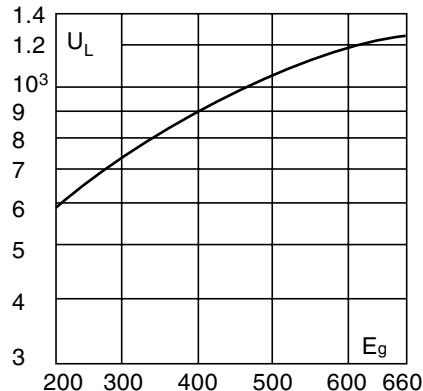

For other power factor values, the total clearing integral can be calculated as a multiple of the clearing integrals, the correction factor K and the correction factor X.

General Applications

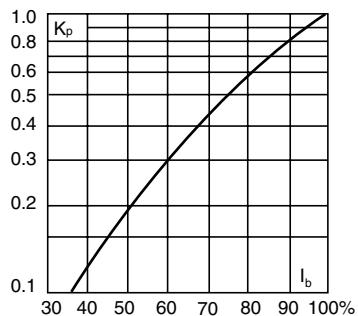

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage, E_g , (RMS) at a power factor of 15%.

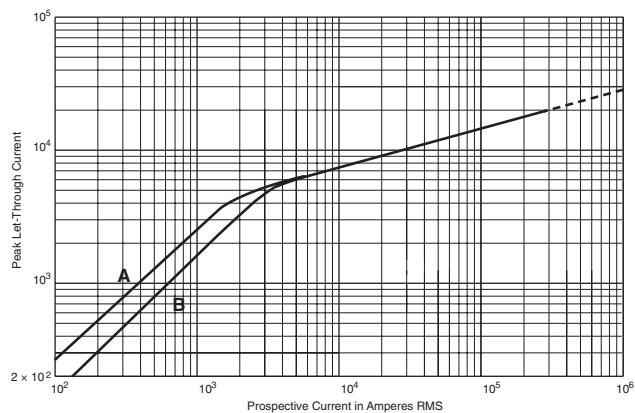

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

Cut-Off Current

A fuse operation relating to short-circuits only. When a fuse operates in its current-limiting range, it will clear a short-circuit in less than $\frac{1}{2}$ cycle. Also, it will limit the instantaneous peak let-through current to a value substantially less than that obtainable in the same circuit if that fuse were replaced with a solid conductor of equal impedance.

A asymmetrical current
B symmetrical current

Parallel Connection

When fuses are connected in parallel it is recommended that the applied voltage does not exceed 0.9 U_N (the rated voltage of the fuse). This is due to the fact that the energy released within the fuses may be unevenly shared between the parallel connected barrels.

When fuses are connected in parallel, one must take into account that the current sharing is not necessarily equal. And it must be checked, that the maximum load current is not exceeded.

Series Connection

Fuses in series may not equally divide the applied voltage. It is recommended that series connected fuses should only be operated at fault currents that yield melting times less than 10 ms and a recovery voltage per fuse of less than or equal to 0.9 U_N (the rated voltage of the fuse).

Mounting Guidance

The recommendations below have to be followed when mounting a Bussmann fuse with end plate threaded holes.

1. Screw in studs: Max. 5 N•m, Min. 3 N•m
2. Attachment of the fuse to buss-bar by means of nut and washer:

Thread Configuration	Max. Torque (N•m)	Min. Torque (N•m)
5/16" - 18, M8	25	20
3/8" - 16, M10	45	40
3/8" - 24	45	40
1/2" - 13, M12	65	50
1/2" - 20	65	50

1 N•m = 0.7375 ft•lb

General Applications

Overloads

The design of Bussmann fuses is such that they can be operated under rather severe operating conditions imposed by overloads (any load current in excess of the maximum permissible load current).

In applications, there will be a maximum overload current, $I_{max.}$, which can be imposed on the fuse with a corresponding duration and frequency of occurrence.

Time durations fall into two categories:

1. Overloads longer than one second
2. Overloads less than one second termed "impulse" loads.

The following table gives general application guidelines which, in the expression $I_{max.} < (\% \text{ factor}) \times I_t$. I_t is the melting current corresponding to the time "t" of the overload duration as read from the time-current curve of the fuse. The guidelines in the table below determine the acceptability of the selected fuses for a given $I_{max.}$.

Frequency of Occurrence	Overloads (> 1 sec.)	Impulse Loads (< 1 sec.)
Less than one time per month	$I_{max} < 80\% \times I_t$	$I_{max} < 70\% \times I_t$
Less than twice per week	$I_{max} < 70\% \times I_t$	$I_{max} < 60\% \times I_t$
Several times per day	$I_{max} < 60\% \times I_t$	—

When impulse loads are an intrinsic/normal parameter of the load current either as single pulse or in trains of pulses or when their level is higher than the melting current at .01 seconds (per time-current curve), contact Bussmann for application assistance.

In addition to the parameters set forth in the preceding table, the rms value of the load current as calculated for any period of 10 minutes or more should not exceed the maximum permissible load current.

Furthermore, it is important that a fuse should not be applied in the non-continuous/dashed portion of the associated time-current curve.

Any time-current combination point which falls in the non-continuous/dashed portion of the time-current curve is beyond the capability of the fuse to operate properly.

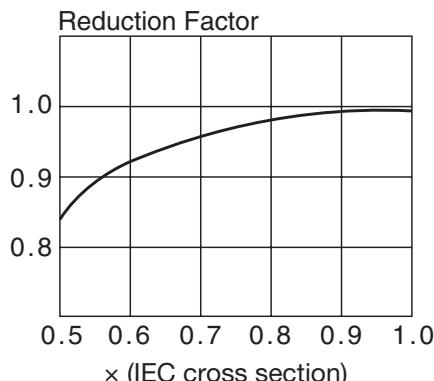

DC Operation

Depending upon the short-circuit time constant and the magnitude of the prospective short-circuit current, the dc voltage at which a fuse can be applied may be less than its ac rating. Long time constants require a lower dc voltage. Conversely, however, higher available prospective short-circuit currents result in faster fuse openings and thus permit a fuse to be operated at a higher dc voltage.

Consult Bussmann for additional information and application assistance when fuses have to operate under dc conditions.

Load Current Versus Conductor Cross Section

Reduction of permissible load current when the conductor cross section is less than that given in IEC Publication 269-1 & 4 valid for Bussmann semiconductor fuses.

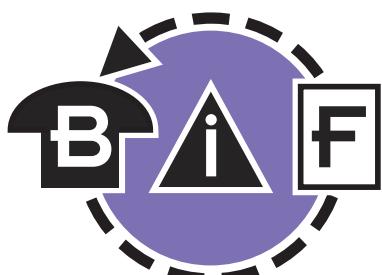

Application Assistance

If you have application problems or need a fuse outside our standard program, please contact the nearest Bussmann representative. Phone numbers are shown on the inside back cover.

General Information

Bussmann offers a complete range of North American blade and flush-end style fuses and accessories. Their design and construction were optimized to provide:

- Low energy let-through (I^2t)
- Low watts loss
- Superior cycling capability
- Low arc voltage
- Excellent DC performance

North American style fuses provide an excellent solution for medium power applications. While there are currently no published standards for these fuses, the industry has standardized on mounting centers that accept Bussmann fuses.

Voltage Rating

All Bussmann North American style fuses are tested at their rated voltage. Bussmann should be consulted for applications exceeding those values.

Accessories

External and internal open fuse indication is available for selected portions of the North American line. Fuseblocks are available for most applications.

North American FWH 500V

Electrical Characteristics

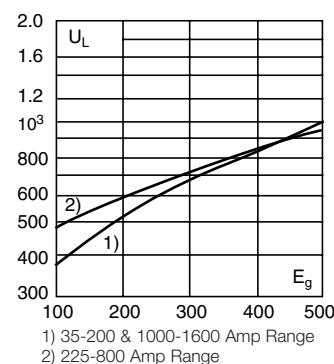

Total Clearing I²t

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K , given as a function of applied working voltage, E_a , (RMS).

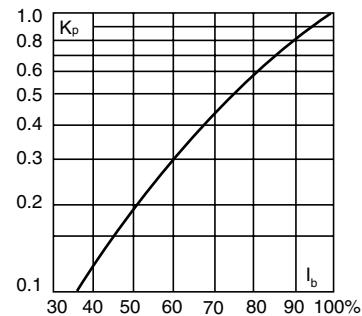

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage, E_g , (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

Bussmann®

North American - Accessories

Fuse Bases (Blocks)

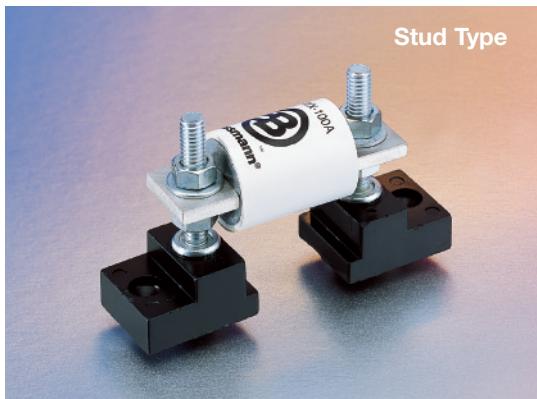

Modular Style

Bussmann offers a comprehensive line of fuse bases that provide the user with design and manufacturing flexibility. Two identical half bases make up a Buss modular fuse base. These "split" units can be panel mounted any distance apart to accommodate any length fuse.

Stud Type

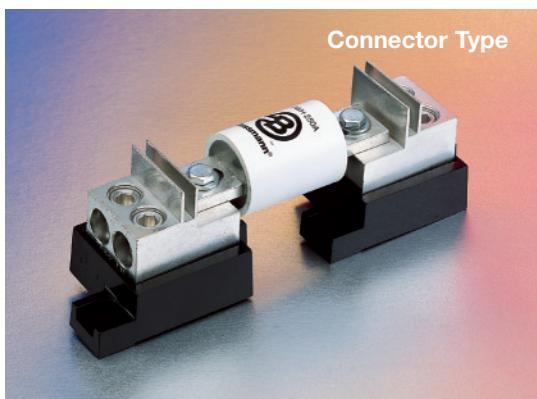

The simpler design is the C5268 series modular fuse base. With this design, the fuse terminal and cable (with termination) are mounted on the same stud, minimizing labor needed for installation. The stud type base is available in the configuration shown in the table below.

Part No.	Max. Fuse Current Rating	Stud Heights	Stud Dia. & Threads
C5268-1	200A	1.00"	5/16-18
C5268-2	200A	1.75"	5/16-18
C5268-3	200A	0.75"	5/16-18
C5268-4	100A	1.00"	1/4-20
C5268-5	100A	1.75"	1/4-20

Connector Type

Bussmann also offers a modular style fuse base that utilizes a tin-plated connector (for wire termination and heat dissipation) and a plated-steel stud (for fuse mounting). The connector type fuse base is available in the configurations shown below. Consult Bussmann for additional product details.

Fixed Center Base Style

Bussmann offers a comprehensive line of fixed mount style fuse bases under the trademark TRON® rectifier fuseblocks. The cable and fuse connections are similar to the stud type fuse base — both are mounted on the same stud. Consult Bussmann for complete product details.

General Information

Designed and tested to:

- IEC 60269: Part 4
- U.L. Recognized

Bussmann offers a complete range of Square Body style fuses and accessories. Their unique design and construction provide:

- Minimal energy let-through (I^2t)
- Low operating temperature
- Low watts loss

Square Body style fuses are a very attractive solution for high power applications which require a compact design with superior performance. The construction and design of Square Body style fuses make it easy for Bussmann to manufacture custom products. Our cataloged offering provides only a sample of the wide variety of product which is available.

Each Square Body style fuse is available with a number of different end fittings. Options include:

- DIN 43 653
- DIN 43 620
- Flush End (Metric/U.S.)
- French Style
- US Style

Voltage Rating

All Bussmann Square Body style fuses are tested to IEC 60269: Part 4. This standard requires a test voltage which is 5% higher than the rated voltage. In North America, fuses are required to clear only their rated voltage.

Accessories

Square Body style fuses are available with three different open fuse indicator systems. Options include visual indication and indication utilizing a microswitch. Fuseblocks are also available for most applications.

Voltage	AC	DC	Ampere Range
690	X	—	10-7500
1000	X	—	20-1400
1250	X	—	50-1400

For complete specification data, visit our Web site at www.bussmann.com
or call Bussmann Information Fax ~ 636.527.1450

Square Body Applications

Maximum Permissible Load Current

The rated current value of Bussmann fuses is based on the ambient temperature in the space immediately below the fuse of 20°C. The following graph gives correction factors (k) for a range of temperatures (-40°C to +80°C). Maximum permissible continuous load currents can be calculated by applying the following formula:

$$I_b \leq I_n \times k \times (1 + 0.05 V) \times K_b$$

where

- I_b** = Maximum permissible continuous load current
- I_n** = Rated current of fuse
- k** = Temperature correction factor
- v** = Velocity of cooling air in m/s (max. 5 m/s).
- K_b** = Fuse load constant 1.0

The maximum permissible continuous load current I_b of a fuse can be checked empirically (i.e., by satisfying the formula below) by making simple voltage and temperature measurements under actual operating conditions after the fuse has been installed in its operating location and loaded at the calculated I_b value:

$$\frac{E_2}{E_1} \times (0.92 + 0.004t) \leq N$$

where

E_1 = Voltage drop across fuse after 5 seconds

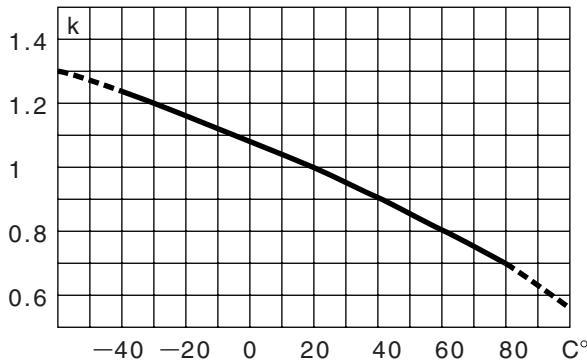

E_2 = Voltage drop across fuse after 2 hours

t = Air temperature at start of test (°C)

N = Constant

Fuse Rated Voltage (IEC)	N
690	1.5
1250	1.6

Temperature Correction Curve

Body Cross Section

Standard fuse program includes barrels with different cross sections.

Size	000	00	1*	1	2	3	4
Maximum Cross-section mm	21 x 36	30 x 47	45 x 45	53 x 53	61 x 61	76 x 76	105 x 105

Square Body Applications

Example Application of Square Body High Speed Fuses

Subject to Overload and Impulse Loading

Select a short-blade indicating fuse with indicator/adapter to permit the use of a single-pole microswitch for remote indication and determine if the fuse selected will meet the following application parameters.

Application Parameters

Load Currents Expected

Load Type	Duration	Frequency of Occurrence	Amperes
(1) Normal	Continuous	—	300A
(2) Overload	60 Seconds	Once Per Hour	500A
(3a)	10 Seconds	2-3 Times Per Week	
(3b)	20 Seconds (max.)	Once Per Month	700A
(4) Impulse	0.5 Seconds	Less Than Once Per Month	1100A

Voltage Data

(5) Voltage Applied to Fuse During Fault Conditions	400V (+10%)
---	-------------

Temperature Data

(6) Temperature Inside Cubicle in Which Fuse is Located (Natural Convection Cooling Only)	60°C
---	------

Thyrister Data

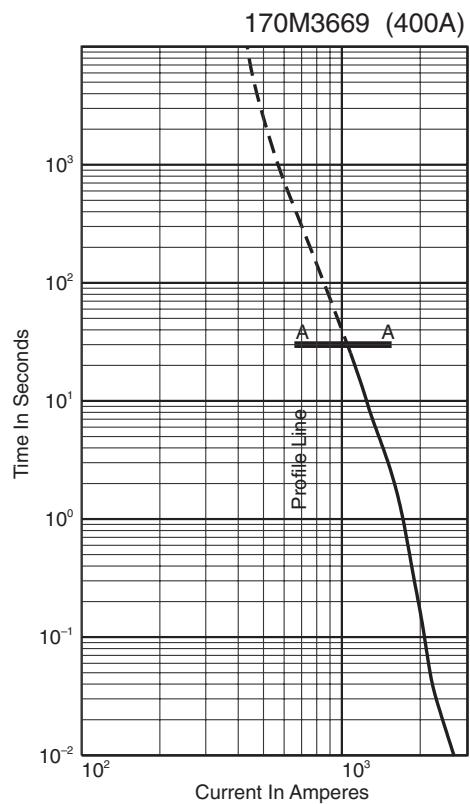

(7) Thyrister Peak Voltage Withstand	1000V
(8) Thyrister I^2t Withstand at 10 Milliseconds*	90,000A ² s

*Note: The I^2t withstand of the thyristor may be given for other impulse durations (i.e., 1.5 ms, 3.5 ms, or 8.3 ms); however, the stated fuse I^2t is valid for all impulse durations of 10 ms or less.

Application Procedure

Step	Procedure	Remarks
(1) Select a short-blade fuse to permit mounting of microswitch MSW710-1S or 170H0069	1.1 Taking into consideration only the continuous load current and ambient temperature, from Table on page 54 tentatively select fuse 170M3669 400A, 690V.	—
(2) Determine I^2t (total clearing) at 440V.	2.1 See Table, page 54. Note I^2t is 105,000A ² s at rated voltage of 660V. 2.2 From the figure on page 55, note that correction factor $K = 0.65$. 2.3 $I^2t_{660V} \times K = I^2t_{440V}$ $105,000 \times 0.65 = 68,250$	OK
(3) Determine maximum arc voltage at 440V	3.1 From the figure on page 55, note that maximum voltage at 440V is 925V	OK
(4) Determine maximum permissible continuous load current I_b .	4.1 Per page 28 data, $I_b = I_n \times k \times (1 + 0.05V) \times K_b$ $I_b = 400A \times 0.8 \times (1 + 0) \times 1$ $I_b = 320A$	—
(5) Plot a "line profile" showing the expected load and overload currents. Determine that overload and impulse load currents do not exceed their maximum permissible values.	5.0 Calculate I_{max} per Table, page 4, for each overload and impulse load.	—
(Item 2)	5.1 $I_{max} < 60\% \times I_t$ 500A < 60% \times 950A 500A < 570A	OK
(Item 3a)	5.2 $I_{max} < 60\% \times I_t$ 700A < 60% \times 1360A 700A < 780A	OK
(Item 3b)	5.3 $I_{max} < 70\% \times I_t$ 700A < 70% \times 1150A 700A < 805A	OK
(Item 4)	5.4 $I_{max} < 70\% \times I_t$ 1100A < 70% \times 1800A 1100A < 1260A	OK

The tentatively selected fuse 170M3669 with microswitch 170H0069 meets all application parameters; no further selection would be necessary.

Calculation of Watt Loss

From the Table on page 54, watt loss at 400 amperes is 60 watts. The continuous load current of 300 amperes is 75% of rated current (400 amperes). From page 55, the correction factor $K_p = 0.5$.

$$\begin{aligned}\text{Watt Loss}_{75\%} &= \text{Watt Loss}_{100\%} \times K_p \\ &= 60W \times 0.5 \\ &= 30 \text{ watts}\end{aligned}$$

Special Fuses

Other high speed fuses are available from Bussmann with voltage ratings of 380 to 10,000 volts and current ratings up to 10,000 Amp in a single unit configuration. Fuses can be supplied with open fuse, "pin" indicators. Various types of microswitches are also available (see page 58).

Square Body - DIN 43 653

690V/700V (IEC/U.L.) 10-400A

Electrical Characteristics

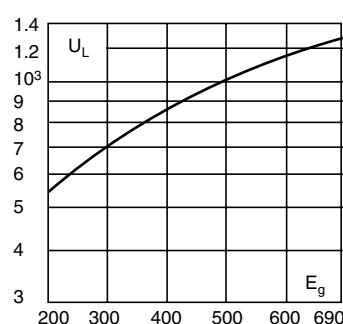

Total Clearing I^2t

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g , (RMS).

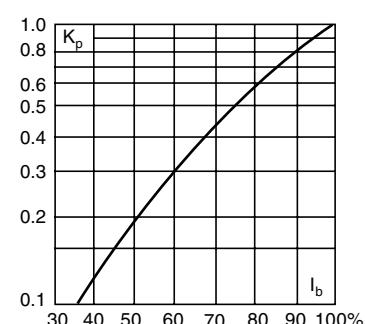

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage, E_g , (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

Electrical Characteristics

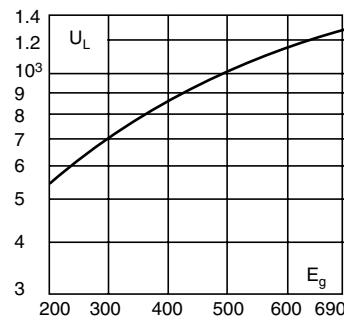

Total Clearing I²t

The total clearing I²t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I²t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g, (RMS).

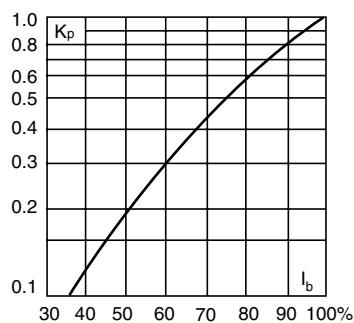

Arc Voltage

This curve gives the peak arc voltage, U_L, which may appear across the fuse during its operation as a function of the applied working voltage, E_g, (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_P, is given as a function of the RMS load current, I_b, in % of the rated current.

- Interrupting rating 150kA (Estimated 300kA) RMS Symmetrical.
- Watts loss provided at rated current.
- Microswitch ordered separately. See accessories on page 68-69.

Square Body - DIN 43 653 1000V (IEC) 50-1400A

Electrical Characteristics

Total clearing I^2t

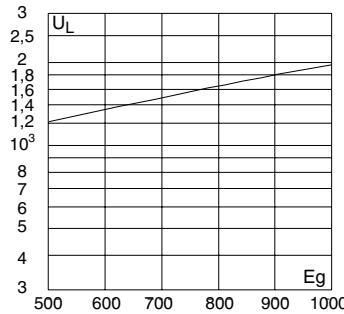

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g , (RMS).

*Rated voltage 900V

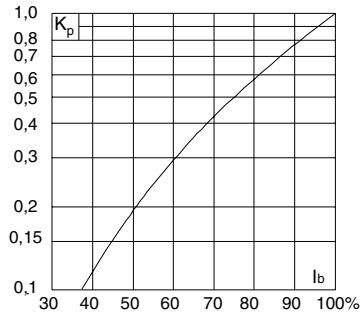

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage E_g , (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

1250V/1300V (IEC/U.L.) 50-1400A

Electrical Characteristics

Total Clearing I^2t

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g , (RMS).

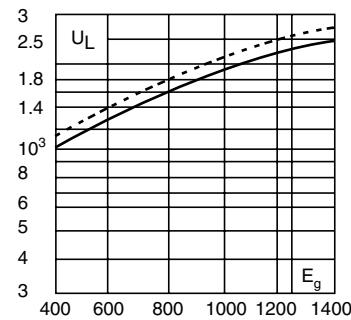

Dashed lines apply to the following amperages:

Size	1*	1	2	3
Amp	400	500-630	630-1000	800-1400

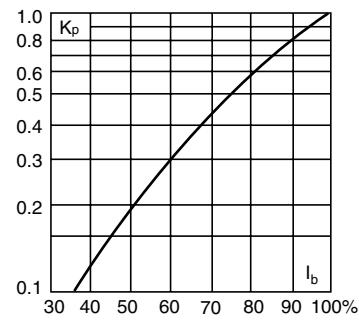

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage, E_g , (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

Rated Current

The rated current of this fuse range has been given with copper conductors that have a current density of 1.3 A/mm² (IEC 60269-4). For conductor cross section according to IEC 60269-1, the fuses with a rated current higher than 125A must be derated. Please contact Bussmann for application assistance.

■ Interrupting rating 200kA (Estimated 300kA) RMS Symmetrical.

■ Watts loss provided at rated current.

■ Microswitch indicator ordered separately. See accessories on pages 68-69.

1 kg = 2.2 lbs. 1 lb = 0.45 kg

Rated Current

The rated current of this fuse range has been given with copper conductors that have a current density of 1.3 A/mm² (IEC 60269-4). For conductor cross section according to IEC 60269-1, the fuses must be derated. Please contact Bussmann for application assistance.

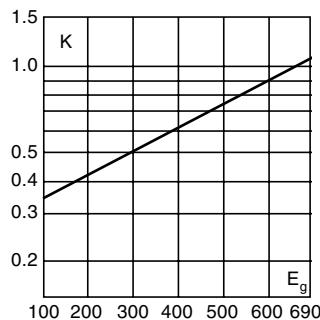

Square Body - DIN 43 620 690V/700V (IEC/U.L.) 40-1000A

Electrical Characteristics

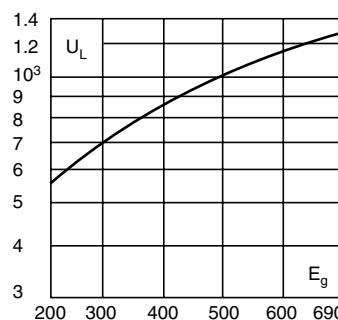

Total Clearing I²t

The total clearing I²t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I²t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g, (RMS).

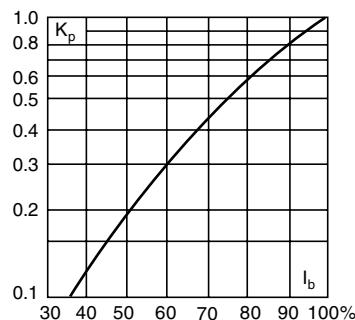

Arc Voltage

This curve gives the peak arc voltage, U_L, which may appear across the fuse during its operation as a function of the applied working voltage, E_g, (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_P, is given as a function of the RMS load current, I_b, in % of the rated current.

- Microswitch indicator ordered separately. See accessories on page 68-69.

Rated Current

The rated current of this fuse range is given with open fuse bases connected to copper conductors according to IEC 60269 Part 1, table 10.

When used in enclosed fuse bases/disconnects, derating factors have to be observed.

Please contact Bussmann for application assistance.

- Interrupting rating 200kA (Estimated 300kA) RMS Symmetrical.
- Watts loss provided at rated current.
- Rated voltage (IEC) +500V
- Liquid Cool. = Liquid cooling. Temperature on the terminals not to exceed 60°C.
- Microswitch indicator ordered separately. See accessories on pages 68-69.

1 kg = 2.2 lbs. 1 lb = 0.45 kg

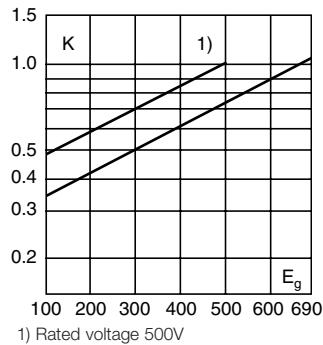

Square Body - Flush End Contact 690V (IEC) 1000-4000A

Electrical Characteristics

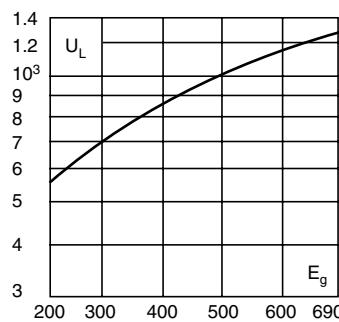

Total Clearing I^2t

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g , (RMS).

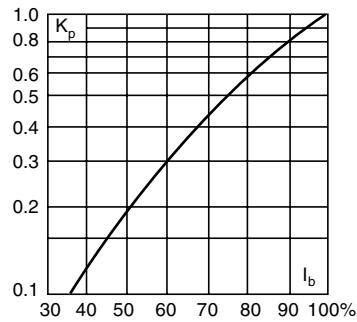

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage, E_g , (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

1 kg = 2.2 lbs. 1 lb = 0.45 kg

■ Watts loss provided at rated current.

■ Rated voltage (IEC) †1100V, ‡1000V, ¥1250V (Consult Bussmann for U.L. Recognition/ CSA Component Acceptance status.)

■ Individual Fuse Weight: Size 1* = 0.380 kg

Size 1 = 0.580 kg

Size 2 = 0.900 kg

Size 3 = 1.250 kg

■ Microswitch indicator ordered separately. See accessories on pages 68-69.

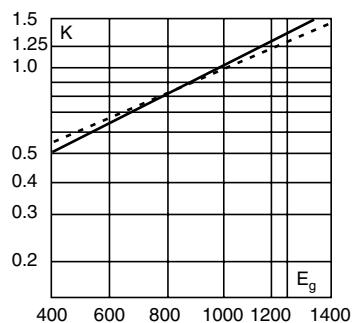

Square Body - Flush End Contact 1250V/1300V (IEC/U.L.) 50-1400A

Electrical Characteristics

Total Clearing I²t

The total clearing I²t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I²t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g, (RMS).

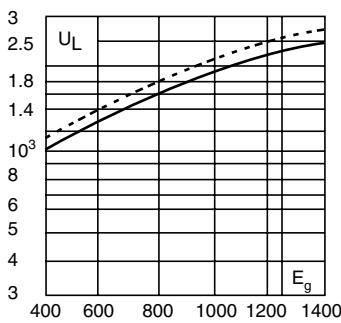

Dashed lines apply to the following amperages:

Size	1*	1	2	3
Amp	400	500-630	630-1000	800-1400

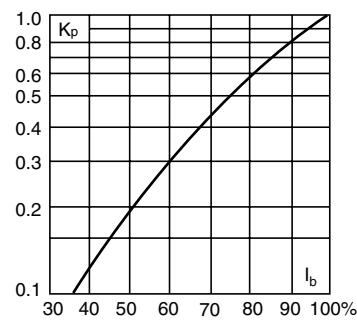

Arc Voltage

This curve gives the peak arc voltage, U_L, which may appear across the fuse during its operation as a function of the applied working voltage, E_g, (RMS) at a power factor of 15%.

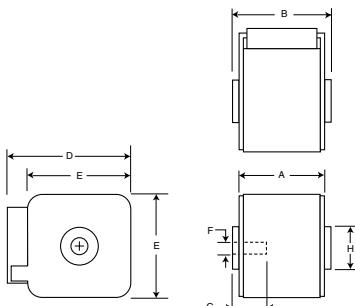

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p, is given as a function of the RMS load current, I_b, in % of the rated current.

Electrical Characteristics

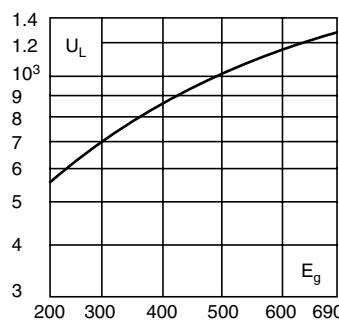

Total Clearing I^2t

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g , (RMS).

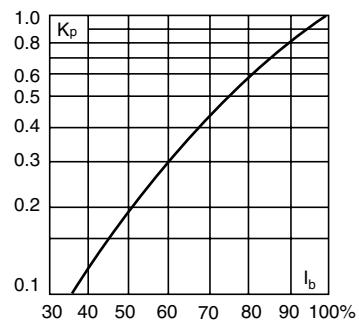

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage, E_g , (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

- Interrupting rating 150kA (Estimated 300kA) RMS Symmetrical.
- Watts loss provided at rated current.
- Microswitch ordered separately. See accessories on page 68-69..

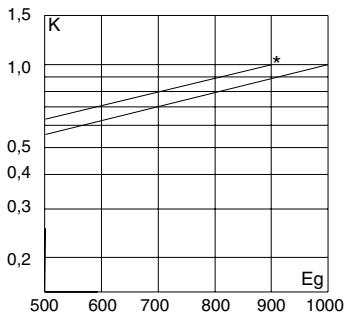

Square Body - US-Style 1000V (IEC) 50-1400A

Electrical Characteristics

Total clearing I^2t

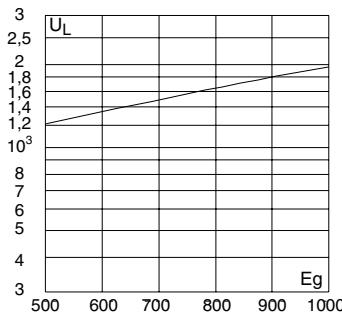

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g , (RMS).

*Rated voltage 900V

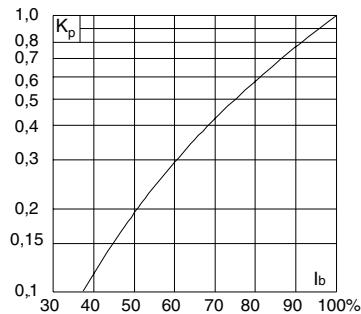

Arc Voltage

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage E_g , (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

Square Body – Accessories Indicator System

Indicators

Typower ZILOX fuses are available with three different indicator systems.

Visual Indicator

The indicator situated in one cover plate is clearly visible as soon as the fuse has operated. The minimum voltage for operating the indicator is 20V.

Type T Indicator

The indicator is situated on one cover plate with a cover plate tag to accommodate an auxiliary switch. The minimum voltage for operating the indicator is 20V. A special low voltage indicator (1.5V) is available on request.

Type K Indicator

This indicator is situated on the fuse body. It is covered by an adaptor for snap-on mounting of an auxiliary switch. The operating voltage of the indicator is 1.5V. As a matter of safety, the factory mounted adaptor must not be removed from the fuse.

Microswitch

The Typower ZILOX fuses with either type T indicator or type K indicator can be equipped with a microswitch for remote electrical indication of fuse operations. All microswitches have one normally open and one normally closed contact. Ratings are 2A, 250 Vac.

Square Body – Accessories Fuse Bases (Blocks)

DIN 43 653 Fuse Bases

For the Typower ZILOX fuses according to DIN 43 653, the following fuse bases are available:

Part Number	Max. Voltage	Rated Current	Center Distance
170H3003	1000V	630A	80mm
170H3004	1000V	1250A	80mm
170H3005	1400V	630A	110mm
170H3006	1400V	1250A	110mm

The fuse bases rated 1250A can also be used for the fuses with higher rated current if the maximum load current is derated according to the table below:

Fuse Rating	Max. Load Current In Fuse Base
1400A	1325A
1500A	1400A
1600A	1500A
1800A	1650A
2000A	1800A

Fixed Center Base Style	Max. Voltage	Max. Fuse Current Rating	Fuse Size
170H1007	1000V	400A	00, 000
170H1013	660V	200A	0000,000

U.L. Recognized to U.L. 512.

DIN 43 653

DIN 43 653

Universal Fuse Bases

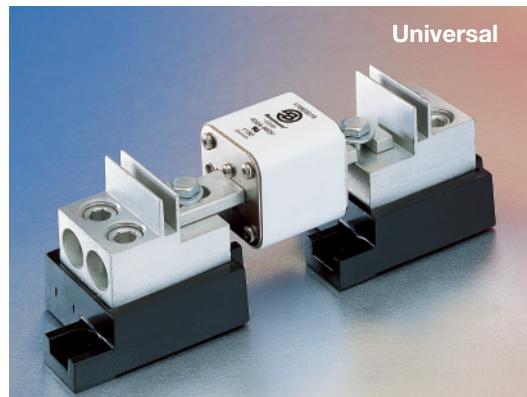

For the Typower ZILOX fuses according to DIN 43 653, French style and North American style, the following fuse bases are available:

Modular Base Style	Max. Voltage	Max. Fuse Current Rating	BIF Document
1BS101	600V	100A	1206
1BS102	600V	400A	1207
1BS103	600V	400A	1208
1BS104	600V	600A	1209
BH-0xxx	700V	100A	1200
BH-1xxx	2500V	400A	1201
BH-2xxx	5000V	400A	1202
BH-3xxx	1250V	700A	1203

Modular fuse bases are U.L. Recognized to U.L. 512 and meet the spacing requirements of U.L. 347. Contact Bussmann sales representative for more complete ordering information.

DIN 43 620 Fuse Bases

For fuse bases used with Typower ZILOX fuses according to DIN 43 620, please contact your local Bussmann sales representative.

General Information

Designed and tested to:

- BS 88: Part 4
- IEC 269: Part 4
- U.L. Recognized

Bussmann offers the industry's widest range of British style semiconductor fuses and accessories.

Bussmann British style products use innovative arc quenching techniques and high grade materials to provide:

- Minimal energy let-through (I^2t)
- Excellent DC performance
- Good surge withstand profile

British style fuses are typically found in equipment manufactured in the United Kingdom or British Commonwealth countries. However, North American manufacturers have begun to specify British style fuses — particularly in UPS applications at 240 volts or less — to take advantage of their size, performance and cost benefits.

Voltage Rating

All Bussmann British style fuses are tested to IEC 269: Part 4. This standard requires a test voltage which is 5% higher than the rated voltage. In North America, fuses are required to clear only their rated voltage.

Accessories

Trip-indicator fuses are available for use in parallel with the main fuse. Indicator fuses can be attached to the associated fuselink, or mounted separately in panel-mounted fusedclips. In addition, a push-on adaptor and microswitch attachment are available, to provide remote indication. Fuseblocks are also available for most applications.

Electrical Characteristics

Total Clearing I^2t

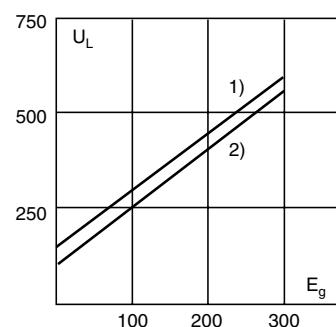

The total clearing I^2t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I^2t is found by multiplying by correction factor, K , given as a function of applied working voltage, E_g , (RMS).

- 1) LCT
2) LET, LMT, LMMT

Arc Voltage

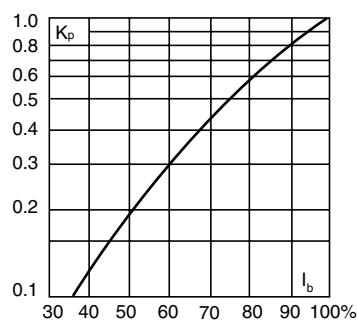

This curve gives the peak arc voltage, U_L , which may appear across the fuse during its operation as a function of the applied working voltage, E_g , (RMS) at a power factor of 15%.

- 1) LCT
2) LET, LMT, LMMT

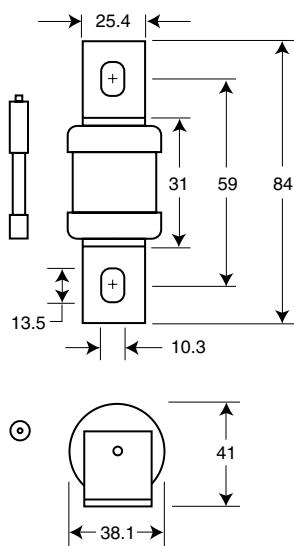

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p , is given as a function of the RMS load current, I_b , in % of the rated current.

British Style BS 88 - Accessories

Indicator System and Fuse Bases (Blocks)

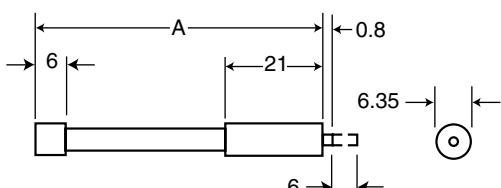

Trip-indicator fuselinks are available for use in parallel with the main fuselinks. They can either be attached to the associated fuselink or mounted separately in panel mounted fuse clips, Part No. CL1. A push-on adaptor and microswitch attachment is available for use with the trip indicator to give the facility of remote indication, reference MAI or MBI.

Fuse ratings of 20A and below cannot usually accommodate a trip fuselink in parallel.

Where trip indicator fuselinks are to be attached to the main fuselink, an accessory pack comprising a pair of mounting clips and an appropriate trip indicator fuselink will be required.

The ordering code references for these packs are listed below:

Fuse Type	Order Ref.	Fuse Type	Order Ref.

General Information

Select fuses designed and tested to:

- IEC 269: Part 4
- U.L. Recognized

Bussmann offers a full line of ferrule style (cylindrical and clip-mounted) fuses, designed and tested to meet standards and requirements in various locations around the world. Their unique design and construction provide:

- Superior cycling capability
- Low energy let-through (I^2t)

Ferrule fuses provide an excellent solution for small UPS, small AC drives and other low power applications where space is at a premium.

Voltage Rating

All Bussmann ferrule fuses — except 660 volt — have been tested at their rated voltage. The 660 volt ferrule fuse has been tested to the IEC 269 standard, which requires clearing at the rated voltage +10%.

Accessories

Ferrule fuses may be mounted in fuseclips, fuseholders, fuseblocks or fused switches. A variety of products are available to suit most end-use requirements.

Dimensions

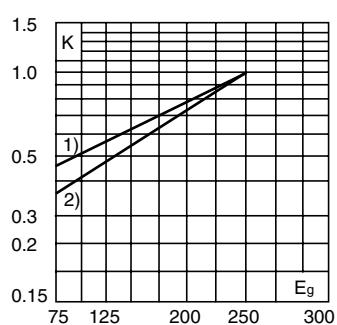

Fig. 1: 1-50 Amp Range

Electrical Characteristics

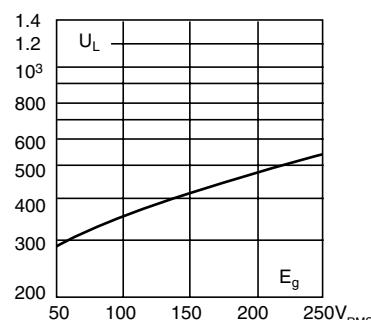

Total Clearing I²t

The total clearing I²t at rated voltage and at power factor of 15% are given in the electrical characteristics. For other voltages, the clearing I²t is found by multiplying by correction factor, K, given as a function of applied working voltage, E_g, (RMS).

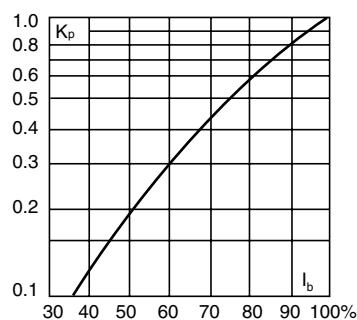

Arc Voltage

This curve gives the peak arc voltage, U_L, which may appear across the fuse during its operation as a function of the applied working voltage, E_g, (RMS) at a power factor of 15%.

Power Losses

Watts loss at rated current is given in the electrical characteristics. The curve allows the calculation of the power losses at load currents lower than the rated current. The correction factor, K_p, is given as a function of the RMS load current, I_b, in % of the rated current.

Bussmann®

Ferrule - Accessories Fuseholders

Catalog Symbol: CH Series

Features:

- 10 x 38 Dovetail design provides maximum flexibility in assembling multiple poles
- Touchsafe design - No exposed contacts
- DIN rail mount (35mm)
- Optional open fuse indication lights
- Excellent for switchboard panel, control consoles, small motors, transformers, and similar applications
- Handle/fusepuller to install and remove fuses easily
- Available in single and multi-pole configurations
- Circuit marking system (P/N CH10CL and CH10CM)
- Wire ready: Saves time as terminals are ready to accept wires.
- CE marking

Standards:

North American 10 x 38 Class CC
